

How to burn an audiobook to CD using Windows Media Player 11

***Burning titles to CD is greatly simplified with the latest version of OverDrive Media Console.**

If you have not already done so, verify that the permissions on the title allow you to burn the file to CD (publishers may opt to disable this functionality):

- a. In OverDrive Media Console, highlight the desired title and click the 'Properties' button.
The 'Properties' dialog box is displayed.
 - b. Click the 'License' tab. (Note that if a 'License' tab is not displayed, the title is not digitally protected and can be burned to CD.)
'License details' for the selected title are displayed, indicating whether or not the title may be burned to CD.
 - c. Click the 'Cancel' button to close the 'Properties' dialog box.
2. In OverDrive Media Console, highlight the desired title and click the 'Burn' button, or choose menu option *File > Burn*.
Windows Media Player opens and begins playing the title; **do not stop playback**.
 3. Select the 'Burn' tab.
 4. Select the 'Now Playing' list under the 'Playlists' heading on the left side of Windows Media Player.
 5. Select the Part you wish to burn and drag it to the Burn list on the right side of Windows Media Player.
 6. Place a blank CDR in your CD-ROM drive and ensure that your CD drive is selected in the right-hand pane of Windows Media Player.
 7. Click the 'Start Burn' button.
Windows Media Player inspects, converts, and temporarily copies the file in preparation for burning. This process may take a few minutes. You can follow the Player's progress by monitoring the 'Status' field in Windows Media Player. When the burning process is complete, the status field indicates 'Complete'.
 8. You can now eject the disc and enjoy your title on CD.
