

Is my device compatible with OverDrive?

Note that in order to use OverDrive Audio Book titles on a device, the device must play DRM-protected Windows Media content, and either support the bit rate of 32kbps or be able to transcode 32kbps files to a supported bit rate.

You may want to check device documentation to determine if a device supports DRM-protected Windows Media content encoded at 32kbps.

If you are using a Pocket PC, OverDrive Media files must be transferred to a memory card. Be sure you have a memory card with sufficient memory space installed, and be sure to specify the memory card in the course of the transfer process.

OverDrive Audio Book titles, provided by OverDrive, Inc., use DRM protection technology from Microsoft Corporation. Unfortunately the iPod, iPhone, and Mac do not currently support DRM-protected Windows Media Audio (WMA) files.

OverDrive, along with hundreds of online digital media providers, is hopeful that Apple and Microsoft can reach an agreement that would enable support for Microsoft-based DRM-protected materials on the iPod, iPhone, and Mac.

Check the OverDrive web site for a current list of compatible devices (<http://www.overdrive.com/resources/drc/compatibledevices.aspx>).

The following list is of known **incompatible** devices (as of 4/14/2008):

- * Amazon Kindle
- * Apple iPhone
- * Apple iPod
- * Archos Pocket Video Recorder
- * Brookstone Tiny Tunes MP3 Player
- * Coby MP-C854
- * GPX MW 3337
- * Mach Speed Technologies 1GB Trio MP3 Player
- * Microsoft Zune
- * Motorola RAZR
- * Panasonic SV-SW30V
- * Phillips SA1100/37
- * Rio Cali
- * Samsung YP-T7J
- * SanDisk Sansa e140
- * Sony NW-S205F
